Weekly Update: Next Partitions

November 2, 2026 · Week of October 27

Two big steps this week. The installer directory now runs end to end on a real test database, and it covers every state plus the 99 cities from your February plan. On the website side we drafted the second batch of pages, new blog posts and a rebuilt ADA guide. **None of this is on nextpartitions.com yet:** we now have access, and we merge it into Marc's code tomorrow.

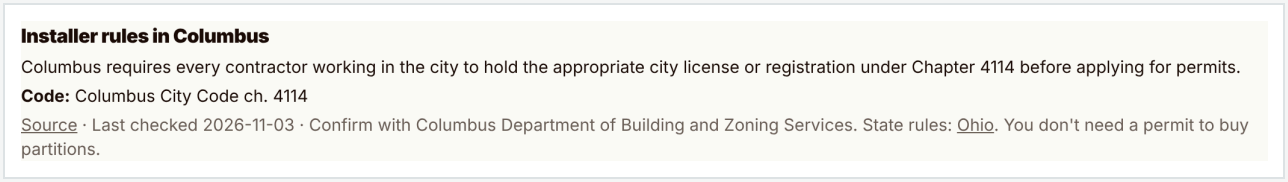

What we did this week

1. **The installer directory works end to end.** We set up a private test copy of your site's database (a "staging" copy, separate from the live site) and ran a whole job through it with test installers and a test customer: application, our checks, the timed test job, inviting installers, their prices, the customer's choice, payment releasing the customer's details, the install and a review. Each step ran as the real person would, so the privacy rules were tested too: installers never saw the customer's details before the customer chose them and paid.
   - The test found four gaps, now fixed: a quote could be shown with no installer prices yet; a job could skip steps (for example be signed off without being installed); accepted documents didn't show on the installer's profile; and the first area wasn't set up automatically.
   - The job emails were generated at every step; on the test copy they're written to a log instead of being sent.
2. **The full directory: all 50 states and 99 cities.** Every state (plus DC) now has its own page, and every city on your February plan has one too, using the same web addresses as the city pages already planned for your site. A city page goes public only once 3 checked installers are listed there; until then the state page lists it as "installers coming soon".

Each state page says, in plain words, who may install partitions there, with the law, the source, the date we checked and who to confirm with.

3. **The rules, researched state by state and city by city.** Buyers ask whether their installer needs a license. Each page now answers that briefly, and never suggests a permit is needed to *buy* partitions.
   - **States:** all 51 have a summary and the governing law; 27 citations are checked against the official statute text. Some common numbers turned out to be out of date: Alabama's license threshold is now $100,000, California's $1,000, Utah's $7,000, and Montana has required a state license since January 2026.
   - **Cities:** each page has a one-line local rule. **38** are confirmed from the city's own code or official pages, **55** come from official sources but need a final check, and **6** need a phone call (Long Island, Milwaukee, Raleigh, Worcester, Los Angeles, Omaha). 50 cite the city ordinance itself.

The city line is kept short, for context. Where we couldn't confirm a rule, the page simply says to check with the city.

A lawyer reviews all of this wording before any of it goes public.

4. **Website pages, second batch.** Drafted and checked against the manufacturers' current documents and the building codes: the materials section (a hub and five material pages, with fire ratings and warranties corrected), the how-to-install guide and the installation instructions by brand (with links to each brand's Revit and CAD files), the stall dimensions guide, standard sizes, restroom layout, the industry and brand pages, and a new design for the blog and guides index pages.

5. **The ADA guide, rebuilt.** Checked line by line against the 2010 ADA Standards, with three new drawings, a simple layout checker and a plain-language section on what happens if the rules aren't met (penalty amounts checked against the Federal Register).
6. **More drawings, and 3D views.** New drawings in your style: layout marks, installation order, door hand, bracket and pilaster types, the gaps in a stall, accessible stall heights, wall backing, latch problems, material cross-sections and urinal spacing. We also made photo-like 3D views of the four mounting styles, built from the drawings' exact measurements, for the tops of the mounting pages.
7. **New blog posts (drafts).** Ceiling hung vs floor mounted vs floor-to-ceiling; HDPE vs phenolic; plastic vs steel; and when to replace your partitions. The cost guide is written but on hold until we have your price ranges: it won't quote other retailers' prices.
8. **Your expertise, built in.** Pages and posts now have a spot for a short quote from you, with one question each about a real job. Your answers make the content something other sites can't copy.
9. **One fix for Marc.** A structured-data error in the breadcrumbs that Google reports on the current site, with the corrected code ready for him.

Open the content preview (all draft pages, plus the installer flow)

What we need from you

1. **Your first area.** Your orders by ZIP code tell us where to recruit installers first. Dallas–Fort Worth in the prototype is only an example.
2. **Price ranges for the cost guide.** Per-stall ranges by material are enough. It's the most-searched article on the plan, and it's ready apart from these.
3. **Answers to the expert questions.** One short question per page; a few sentences each, by email or on a call.
4. **A lawyer for the review.** Before anything goes public, a lawyer should read the listing agreement, terms, disclaimer and the state and city rules. Let us know who you'd like to use.

Coming next

1. **A test site you can click through,** showing the directory with its real pages on the test database.
2. **Prices only after an email,** as agreed: the quick pricer shows the price range once the visitor enters their email, so each price becomes a lead.
3. **The customer review page,** so only customers with a finished job can leave a review.
4. **Phone checks** for the six cities whose rules couldn't be confirmed online, then the lawyer's review.
5. **New pages merged tomorrow** into Marc's code, ready for him to publish, then the business listings (Google, Apple Maps, Bing, Yelp, BBB) with one name, address and phone everywhere.

Installers, prices and reviews in the prototype and on the test database are made up.
